School Window Installation – Phase Two

After installing a large area of the school with new aluminium windows, the school window installation – phase two works were given the go ahead. The installation was in an area at the rear of the school which included classrooms and corridors. The remaining classrooms required the original Crittall windows and doors to be replaced. The Crittall windows were single glazed and past their best. The new aluminium, double glazed windows and doors improve the security as well as the thermal efficiency, lowering energy costs as well as improving the building's carbon footprint. Additionally, the look of the building was vastly improved. To make sure that all of the windows and doors were uniform with the ones installed previously, the same specification of window and door was used.

To ensure safety and the ease of opening, all high level windows, teleflex window winders were installed.

Programme of Works

Due to the number of windows that needed to be replaced, the school required that project be completed in phases. This allowed the school to control their budget over a number of years.
