School Gate and Fencing Installation

We were successful in being awarded this School Gate and Fencing Installation project after an open tender process. The school's previous chainlink fencing was becoming damaged in areas and not suitatble for securing the front of the school.

New Fencing

Work started with removing the exisiting fence and prepare the area for the new fence. This included cutting back and removing some of the larger shrubbery. Once the area was clear we then installed the new galvanised V mesh fencing. The fencing was installed along the front boundary of the school. In addition, two large automated, access control gates were installed to help with deliveries and other school visitors. The original gates were smaller and wider alternatives were required.

Additional Works

As well as the main fencing, the school requested that we install a timber fence to create a parent and student walk way for pedestrians which allows safe passage past the car park.
