PROJECT 132: Residential Property in Chatham, Kent

Client: Private Client

Programme: 12 weeks overall including renovations

Construction Details: Renovations, Structural Works, uPVC Window and Door Installation

View this case study on WallerServices.com

As part of the extensive renovations at this property, new uPVC windows and doors were installed to both improve the aesthetics and reduce the heat loss potential of the property.

In conjunction with the new window installation, the existing French doors in the dining room were removed and the opening enlarged. New uPVC bi-fold doors were installed in the larger opening giving the feel of the house and garden merging as one.

Building on trust... together
