Secondary School Aluminium Window Installation

This secondary school aluminium window installation was carried out in conjunction with our building division. Waller Building and Glazing Services were awarded the contract to completely refurbish the school's humanities block, internally and externally. A major part of the project were the new aluminium windows and doors. As an addition to the double glazed windows, the installation of grey metal infill panels were the final touch to match the grey aluminium window frames.

The original curtain walling was completely removed and replaced with a new steel framework which was designed by our structural engineer,the windows and infill panels were installed within the the new framework.

Along with the new composite cladding installed by Waller Building Services, the new windows transform the external look of the building. The transformation of the internal appearance has also been remarkable. The school will also notice an enhanced thermal efficiency due new double glazed windows. This should mean that the schools heating costs will be noticeably lower with an additional benefit of improved security.

This was a great project that we all enjoyed working on. We hope to work closely with the school again in the future.
