School Classroom Conversion Into Toilets

This school classroom conversion into toilets project consisted of transforming a large classroom into new toilets. The facilities were for both male and female students. Works included building new studwork partitions which formed individual toilet cubicles. Additionally, the installation of new drainage, plumbing and electrics converted the once learning space into the new facility. To provide a modern feel, new suspended ceilings were installed as well as durable, anti-slip flooring, both toilet blocks were decorated throughout. To complete the look internally, LED lighting was installed which will be more energy efficient and modern than the previous lighting system.

Part of the building's change of use meant that, externally, new UPVC doors and infill panels were required and, where needed, frosted glass was fitted to provide natural light but to also ensure privacy.
