School Hall Window Replacement

This school hall window replacement project was the latest installment in a programme of works to upgrade all of the school's windows. Within the works was a structural element which was required due to the current roof having dropped in areas.

The reason for the failing roof was that the original wooden window cills had rotted away causing the windows to move and the roof drop. When we removed the original windows, we installed new engineered steels, which when in position ensured the integrity of the roof, making it safe and secure. In addition we installed new aluminium framed double glazed windows and metallic white panels. As well as this, we added hand window winders to open high level windows to ensure easy opening and provide ventilation.

High Level Works

To address the challenge of working at high level, scaffolding was required both internally and externally in order to install the windows safely.

With a large area of the school's windows now being upgraded, we look forward to completing the project in the near future.
