School Entrance Planter Re-design

Beaver Green Primary School had old planters leading up to the school reception. Unfortunately, they had seen better days and the original materials used had come to the end of their life with the wood rotting away. The deteriorating planters were causing safety concerns for the school. The school asked us to come up with some ideas for a solution which would include little or no maintenance.

The Solution

We advised that the original planters be stripped back to the existing dwarf blockwork wall. The structure would then be over clad with a composite material that is resistant to bad weather and rotting away.

The school gave us the go ahead for our design, and as the project progressed, the proposed planter design was adapted to create an enclosed finish. This would ensure that no maintenance was required with no future plant or foliage control required. We capped the clad area to create a modern looking design which complemented the school building
