School Rubber Crumb Football Pitch Installation

This was an interesting project carried out at a school in Medway. The school had an unused area of their field that needed to be utilised. They wanted to have a new rubber crumb football pitch installed to create an extra area for exercise and recreational activity.

Preparation

The identified area was on a slope which needed to be levelled out. This was achieved with large plant machinery. The next stage was to build a retaining wall around the edge of where the new pitch would be located. When this was in place, a concrete base was laid with a tight rubber surface installed on top. This would be the top playing surface and football pitch lines were added.

The Benefits of Rubber Crumb Surfaces

Rubber crumb surfaces are perfect for the education sector. Rubber crumb is a safe surface for playgrounds because it absorbs impact from falls. It is also a non-slip surface and can protect athletes and children from serious injury. It is a highly shock-absorbent material that can spread impact through the layers of rubber. The surface is durable and long-lasting, with a life expectancy of over 15 years. In addition, rubber crumb surfacing is low maintenance and easy to clean.-

Security Fencing

8 foot security fencing was then erected around the new pitch and the surrounding area was landscaped.
