Single Storey Extension, Tunbridge Wells

Client: Private Client

Construction Details:

View this case study on WallerServices.com

The aim of this project was to enhance the ability of a young family to provide care for a young disabled person. As part of the project, we formed a special needs bathroom which included the installation of an Astor Bannerman electronic rise and fall bath, a larger bedroom area and new ramped access all tailored to suit the disabled child.

A new concrete parking bay and access ramp was also built to improve access to the property.

The project was commenced in February 2008 and completed in June, 2008

Here-are photos showing the project at its critical stages:

Building on trust... together
